Dear Kari,

How incredibly cool that you received us with the SDR receiver close to Lathi, we are glad that you have made several beautiful sound clips about your reception today. It is always nice to receive a receipt with a personal note!

Today the conditions on shortwave are not that good. We are very dependent on the skip-zone. In spite of this, we have received nice reception reports from Europe and the United States.

Today was the first test-transmission on 6020 kHz. I'm glad that the modulation was good, we put a lot of time into it and use an Orban Optimod to process the audio.

Hopefully you will hear us soon again!

I wish you and your family a good and healthy 2021, take care!

Regards,

Aart

Radio Delta International

Radio Delta International is one of the oldest pirate stations from the Netherlands with 'live' programs on the shortwave band.

In the Seventies we were very active on the medium wave 227meters. At that time we did our broadcasts with a old French army transmitter (BC191) and a horizontal longwire antenna of 45 meters. Big difference is that we now use Pulse-width modulation with an Orban Optimod. We often get compliments about the strength and quality of the modulation in our reports.

In the Eighties we were active on 48 and 41 meters, we played nice shows in co-operation with well known stations. There were many stations with different programs, such as the Johnny Walker, Koraalvisser, Nolan, Zilvervos. After a few years of silence, we have built a new transmitter and studio.

At this moment Radio Delta International is a non-commercial private legal radio station. Our hits are mostly playing from vinyl (45rpm).
