Just nu flödar solen över större delen av landet och alla semesterfirare har det bra. Även SWB-medlemmarna tar ledigt både från radio och landet. TS sänder hälsning från Paris. Hittills har sommaren varit dålig ur DX-synpunkt, men den gångna natten tycks det ha vänt till det bättre, så varför inte kolla upp banden under veckan och sänd era hörligheter till LAB som nu tar över redaktörsskapet för 3 nummer.

Först en kommentar till BJ's musikstation runt omkring Venceremos från SB: "Din musikstation var antagligen station tillhörig regeringen och USA som försöker störa ut gerillastationen med musik. Venceremos kan höras mellan 6.2 och 7 MHz numera och man sänder på 2 frekvenser och byter frekvens från dag till dag för att undgå QRM-sändarna".

Well,well,well,I got answer from 2 members!,and Dario Monferini in Italy,on my beg for FRENEX! The members are LA and BD.

Of those 3 I select BD,because he is the only one that says I can keep the magazine afterwards.I keep all used material as reference in the future.

A great thank you to LA and Dario for their offer!

Perhaps you can help me sometimes in the future.

Now over to this numbers info:

WRTH-LANL/THE

BRAZIL

A Swedish DXer, Olle Alm, has got the new ID for R Independencia, Manaus. It is R Jornal. He heard it June 4th on 4935 kHz.

DXR

PERU

R Huanta 2000, 4755 kHz, mentions in a QSL that their power is 1 kW, and the schedule to be 0900-0430 (mentioned earlier is 0230). They also mention an associated station, R Cobriza 2000, on 4925 kHz, serving a copper mining camp with 500 W.

GH/RCI

UNID heard on 9990 kHz between 0341-0403, seemingly Estacion 2000, in Pto Maldonado. That could be 2nd (4995) or 3rd (3330) harmonic

DRAKE R7&RR3 - PREAMP ALSO ON MW

To read this: look at the drawing of Bandpass Filter Module!
 That the pre-amp isn't use-able on band 1, band 2&3 is accomplished by C1532 on band 1, and C1533 on band 2&3. These capacitors stop DC from reaching ground from R1303, to the left of the drawing.
 This prevents relay K1301 to switch on when "PRE AMP" is pressed.
 To select PRE AMP - NOT PRE AMP also on MW: Simply disconnect the resistor end of R1303, closest to switch S1301, from PC-board and then connect it to earth. The blocking effect of C1532&C1533 is now by-coupled, and PRE AMP could be switched in also on MW.
 By this method you can reach down to approx. 1.2 MHz.
 By increasing input&output capacitors of PRE AMP to 0.1 uF you reaches 1 MHz.
 If you want to go lower it is necessary to increase L1301 of the PRE AMP.
 Then you must have a switch to select SW/MW - usage.
