Mauritius In the recent DX press there have been reports of mauritius back on SW 4855 kHz. This is incorrect. This report was picked up by a few DX-programmes and has been reproduced in magazines and also this information has in turn produced some assumed Mauritius loggings. Here in Piliyandala we have been monitoring extensively for weeks and we don't hear any activity on SW. However what we hear is Mozambique Maputo with its English Service s/on with a tuning signal from 1750-1800, at which time EE ID is given and then they go into English. S/off at 1900 with the National Anthem. This fits into the Mauritius report exactly. The freq of Maputo has been measured as 4854.8 kHz. WRT((lists the SW Sce freq. Let us hope they come back some day (Victor G)
